

## **Our countries Development Education /Ethiopia vs Mongolia/**

As far as I know, Ethiopia is a small island nation with less development. However, because they have a population of 105 million, it seems that everyone is very difficult to live in, with little to no geographical area. Africa is a country with a small natural resource base. Mongolia, on the other hand, is relatively large in terms of size per capita, and is located in the bosom of the rich Central Asian virgin four-year-old. The population is only 3 million.

The education system is the same in both countries. Both have a 12 year system. Our country has just transitioned to a 12-year-old system, and children start attending classes at the age of six by writing literacy.

But politically, both have chosen democratic government, but it is a pity that the development of our two countries is not as successful as the rest of the world, due to the lack of support by the two state's governments and the development of narrow policies.

But the guys who represent the new generation are really proud of the fact that we have a great passion for self-development and for the country. As we strive for this hard work, we still believe that in the coming century, our two nations will have the opportunity to overtake other leading nations in their development as well as outrun them.

Therefore, we will seek the opportunity of developing countries to discover and analyze the experience of a developed country, to discover and understand the secrets of their culture and success.

We young people have many wonderful future ahead of us. You see, all the exit opportunities are open. We must not lose the courage and persistence that endure in endurance. I am a representative of the new age, who have decided to dedicate this body to do my best to contribute to the development phase of the country, far beyond what I can see.
